

# **CS471: Operating System Concepts**

**Fall 2007**

## **Guidelines for Examination I**

**Date: September 29, 2007 (Saturday)**

**Time: 8:30-11:30 AM**

**Place: Teletechnet centers (Learning Assessment Center in Gornito Building for Norfolk campus)**

**Points: 150**

**Chapters covered: 3,5,6,7,8**

**Number of questions: 5 (One from each chapter).**

**Each question will have several parts.**

**Type of questions: Some can be answered in one line. Others may need some explanation. Some involve numerical computations.**

**DO REMEMBER BANKER'S ALGORITHM. I won't be providing code for this one.**

Manage your time well. 180 minutes and five questions.

There is a tendency for some students to write pages and pages when the answer is just one line. So answer only what is asked, not all that you know. The space provided for each question is adequate. If you need more, use the white space provided at the back of each page.

**Unless arranged well in advance, no make-up test will be provided. So if you cannot take the test at the specified time and day, let me know well in advance so you can take the exam earlier.**
